

TEXTRON Lycoming

652 Oliver Street

Williamsport, PA 17701

U.S.A.

570/323-6181

IS YOUR VEHICLE LARGE ENOUGH TO PICK UP YOUR ENGINE?

All engines shipped from Textron Lycoming are boxed on a pallet with dimensions ranging from 39 x 39 x 25 (L x W x H) to 65 x 40 x 30 and weights from 400# to 750#.

Engines are loaded via forklift with the length dimension determining the required opening of the vehicle. In the case of large turbocharged and eight cylinder engines, engines will not be end forked.

Engine boxes or pallet will not be removed to accommodate an undersized vehicle.

NOTE!

Textron Lycoming reserves the right to refuse to load any vehicle where such action would endanger the safety of the customer or our shipping personnel or result in damages to the product.

To avoid the possibility of not being able to depart the factory with their new engine the following vehicle guidelines need to be followed.

- No Sport Utility Vehicles or Station Wagons
- No Mini Pick Up Trucks*
- No Pick Up Trucks with Caps*

To avoid delays in loading please plan to arrive at the factory between 7:00 A.M. and 2:00 P.M. EST; shipping is quite busy loading commercial trucks between the hours of 3:00 P.M. and 5:30 P.M.

Please advise your customers of these guidelines so that you, your customer, or Textron Lycoming is not put in an awkward situation such as not being able to deliver the engine at all.

Thank you,

Textron Lycoming --- Traffic & Shipping Dept.
